

SET-19

QUESTION-1

Aim

To create a bar chart showing the number of employees in each department.

CODE:

```
import pandas as pd

import matplotlib.pyplot

as plt data = {

    "Employee ID": [1, 2, 3, 4, 5],

    "Department": ["Sales", "HR", "Marketing", "Sales", "HR"],

    "Years of Service": [5, 3, 7, 4, 2],

    "Performance Score": [85, 92, 78, 90, 76]

}

df = pd.DataFrame(data)

department_count = df["Department"].value_counts()
```

```
plt.bar(department_count.index,  
department_count.values) plt.xlabel("Department")  
plt.ylabel("Number of Employees")  
plt.title("Employee Distribution Across Departments")  
plt.show()
```

Result

Thus, a bar chart was created successfully to visualize the distribution of employees across different departments.

QUESTION -2

Aim

To generate a line chart showing the performance scores of employees.

CODE:

```
employee_id <- c(1, 2, 3, 4, 5)  
performance <- c(85, 92, 78, 90, 76)  
plot(employee_id, performance,
```

```
type = "o",    xlab = "Employee  
ID",    ylab = "Performance Score",  
main = "Employee Performance  
Trend") Result
```

Thus, a line chart was successfully created to visualize the employee performance trend.

Note: Since the dataset does not contain an actual time column, Employee ID is used as the sequence for visualization

QUESTION -4

Aim

To develop and display a table containing the performance details of each employee.

```
/SET-19.1.py  
PS C:\Users\nithy\OneDrive\Documents\DHDV> & "C:\Program Files\Python313\python.exe" c:/Users/nithy/OneDrive/Documents/DHDV  
/EXP-19.4.py  
Employee Performance Data  
Employee ID Department Years of Service Performance Score  
0 1 Sales 5 85  
1 2 HR 3 92  
2 3 Marketing 7 78  
3 4 Sales 4 90  
4 5 HR 2 76  
PS C:\Users\nithy\OneDrive\Documents\DHDV>
```

CODE:

```
import pandas as
```

```
pd data = {
```

```
    "Employee ID": [1, 2, 3, 4, 5],
```

```
    "Department": ["Sales", "HR", "Marketing", "Sales", "HR"],
```

```
    "Years of Service": [5, 3, 7, 4, 2],
```

```
    "Performance Score": [85, 92, 78, 90, 76]
```

```
}
```

```
df = pd.DataFrame(data)
print("Employee Performance
Data") print(df)
```
